

ABSTRACT

The Smart Women Safety & Emergency Response Application is a mobile-based solution designed to enhance the safety and security of women by providing instant assistance during emergency situations. The application integrates advanced features such as GPS-based live location tracking, SOS alerts, voice activation, and real-time communication with pre-registered contacts and emergency services, ensuring quick response and support. It may also include functionalities like identifying nearby safe locations, accessing emergency helplines, and storing evidence for future use. By reducing response time and enabling proactive safety measures, the system empowers women to move freely with greater confidence and independence. This project aligns with the goals of the United Nations, particularly **SDG 5: Gender Equality** by promoting women's empowerment, **SDG 9: Industry, Innovation and Infrastructure** through the use of innovative technology, and **SDG 16: Peace, Justice and Strong Institutions** by contributing to a safer and more secure society.
